iKOMPASS ANDROID TRAINING

LONDON . SINGAPORE . MALAYSIA . AUSTRALIA . PHILIPPINES . INDIA

Our Android courses show developers and programmers what they need to program for the Android operating system -- the core building blocks, how to put those blocks together, and how to build compelling apps that work on a full range of Android devices.

>01 : / **ANDROID IS THE TOP OS FOR TABLETS** /

Capturing 62% of the overall market, Google's Android OS is now the top operating system for tablet devices. With sales of almost 121 million devices during 2013, compared to 53 million in 2012, Android has powered past Apple's iOS as tablet sales reach a combined 195 million units. According to Gartner's latest research Android has 61.9% of the market, with iOS on 36.0%.

In our Android course in Singapore, you will build small applications and widgets and also work on larger applications involving different UI design techniques. The program is 75% hands-on and 25% lectures. While we do provide systems in our lab, we encourage participants to bring in their own laptops so that the assignments taken up in class can be continued at home as well.

>02 : / **5 DAYS ANDROID TRAINING WITH JAVA BASICS** /

Our Android Training Course with Java Basics in Singapore covers Android application development using the Java programming language and Eclipse development environment. The course is **designed for people with no experience in Java**. The course starts with teaching students about creating basic java applications and reviewing java object oriented concepts and then moves on to teaching on creating Android applications.

This course provides an introduction to the Java language and Android programming wherein students will be able equipped with skills for analyzing, designing, developing and troubleshooting java applications.

GET THE MOST OUT OF YOUR TRAINING.

The training is structured to provide 75% hands-on experience. You will work on building small applications and widgets in the class. After class, in case you need support for your projects, our trainers will be accessible as experts to guide you upto 6 months.

TEACHER:STUDENT

In order to sustain a high individual attention, we maintain a low teacher to student ratio. For every one teacher, we normally limit the number of students to 15. As such our Android development courses fill up quickly. To avoid disappointment, we recommend you register as quickly as possible. In case you want to cancel or move to another date, you will need to let us know at least a week in advance so your seat can be assigned to someone else.

iKOMPASS

5 DAYS ANDROID TRAINING

TARGET AUDIENCE

The course is ideal for people with no knowledge of Java. No prior knowledge of the Android OS is needed. You can attend the course even if you have no working knowledge of Java to get a basic understanding of Android. While no experience in Java is expected, this course assumes that students have knowledge of some basic programming language such as C or Python.

PRE REQUISITES

To attend and benefit from this course, you need to have some basic knowledge of programming languages such as C or Python

SOFTWARE/HARWARE

All the software needed for the training is available free as open source. At a minimum, your laptop should have the following configuration:
Core 2 Duo, 1.5 Ghz, 4 g RAM, 1 g disk space
OS: Windows 7

This course is an excellent stepping stone to the wonderful world of applications and games development for mobile devices for IT professionals with no Java background

Java basics Course Objectives

- Understand object oriented programming principles
- Write Java syntax, including declarations, operators, , assignments generics, annotations, enumerations, naming conventions, flow-control structures etc.
- Package and organize Java code into classes and libraries (JARs)
- Use best-practice design patterns when developing Java code

+Android Course Objectives

- Covers all the concepts needed to build great apps

Roles that benefit from this training

- Freshers with knowledge of basic programming
- Developers
- Programmers
- Business Analysts
- Consultants
- Project Managers
- IT professionals looking for exposure to Java and Android

Java basics + Android development

This 5 days course covers 2 days of Java basics followed by 3 days of Android development. The course is ideal for those who have no experience in Java or those who need a refresher in Java prior to starting on Android.
